Re: 443.925 repeater coordination

This is to advise you that there have been no objections to your proposed 3/4 meter band voice repeater. Therefore, the following frequency pair has been assigned for your use as noted.

Frequency Assignment: TX: 443.925 RX: 448.925
Location: Baraga, MI Latitude 46:46:38 Longitude 88:32:59

Antenna Height above Ground: 80 ft.

Effective radiated power: 65 watts

Any variation from the above location, or a change in ownership will render this coordination null and void. You must notify the coordinator of any intended changes so that the process of recoordination may be initiated.

Written confirmation that your repeater is operational must be sent to UPARRA. If your repeater is not operational within 180 days from this date, you must inform UPARRA of your plans as to whether or not you intend to proceed with construction. If you fail to do so, this assignment will be terminated and the frequencies declared open for reassignment. It is the responsibility of the repeater owner or trustee to keep UPARRA informed of your progress.

Enclosed is a copy of the UPARRA Operational Report form. Please use this form to report completion of construction.

Good luck with your project.

73.

Noel A. Beardsley, K8NB, Frequency Coordinator
